## PACWAY™ RECYCLING AND WASTE MANAGEMENT SYSTEMS

---

RAWM is designed for:

- Municipal Landfills and Transfer Stations
- Private Landfills and Transfer Operations
- Paper and Metal Recyclers
- Other Recycling and Waste Management Organizations

Pacific Industrial Scale Co. Ltd. has designed a system to automate the transaction processing and reporting requirements of recycling and waste management facilities. RAWM is a computerized workstation that communicates with and controls up to two electronic scales per computer station. This software package is designed to produce weigh scale tickets, process payments, record data for accounting analysis, and invoice for selected time periods.

There are two modules in the Pacway RAWM system. The scale module processes scale tickets and payments. The office module creates invoices and payable vouchers. The invoicing module can receive data from the scale program in daily, weekly, or monthly downloads. It posts to popular accounting systems, and creates an audit trail. Both modules have extensive reporting capabilities.

A part of the audit trail is the unique sequential ticket ID. A ticket cannot be deleted, but can be voided. Edited and void tickets are written to a special audit file. The audit file contains the original data entered in the ticket, and references the changed tickets.

An inexpensive upgrade and support package is available for this system.

Benefits of RAWM system:

- Quick, accurate cash reconciliation
- Billing account customers can be done quickly
- Inventory costing is easy
- Automatic control of traffic lights at scale site
- Excellent security and audit trail

RAWM systems answer questions like:

- How much waste paper was received today?
- What time of day do most loads come in?
- Who are our best customers?
- What is the source of most of our materials?
