## PACWEIGH RWA OFFICE SOFTWARE MODULE

The **PACWEIGH Office Module** produces Invoices and/or Payable Vouchers from scale tickets produced by the office module or one of the additional modules. Allowing Invoices to be posted electronically to your Accounts Receivable or Accounts Payable software.

Transaction data can be generated by the Office Module or created by the **PACWEIGH RWA Scale Software Module**. Data can be shared between the two modules in real-time or by receiving batch exports from the Scale Module. Designed to work with different network models including:

- Networked
- Stand alone
- Terminal Services and Citrix
- Or a any mix of the above

The Office Module also functions as a corporate record keeping database – able to provide both audit information and reporting on financial and operational issues. In addition, the program is able to generate a wide

... provide both audit information and report on financial and operational...

variety of statistical reports. The system allows you to keep transaction data on file indefinitely for statistical reporting.

Excellent security and audit trail

### Features of the Office Module

- Actual invoices and vouchers for materials and cartage
  - Payable vouchers to trucking companies who supply cartage.
  - Permits payments to trucking contractors
  - Invoice/voucher posting journals
  - Summary of invoice batches
  - Configured to bill accounts on different cycles (e.g. some can be billed twice a month, some once per month)
  - Controls revenue/expense distribution to general ledger
  - Interface to Bellamy, ACCPAC, Xyntax, MAIS, Vadim, Great Plains, Solomon, PeachTree Accounting System and others
  - Manually input tickets, adjust, void and reverse ticket entries; complete audit trail
  - Audit trail of edited tickets (both edits from the scale and at head office); audit report may be run at any time
- Configurable menu item and functional security
  - Allows you to turn on tracking for data fields such as Trucking Company, Source, Zone, Cell, Job, Purchase Order, Release Number.
  - Allows for tracking incoming and outgoing materials
  - Pricing system is flexible and, allows for multiple prices for the same material depending on customer, job, source or destination of material, purchase agreement and so on
  - Supports up to 4 levels of taxes and surcharges
  - Taxes can be layered (that is taxes can be taxable), and can be based on weight or value
  - Can retain very large amounts of ticket and invoice data in detail for analysis.
  - Able to invoice and report on data from an unlimited number of sites
  - Includes standard statistical reports as well as a built-in report writer to create and save your own reports.
  - System performs well with over 1,000,000 tickets on file
  - Reprint of scale tickets
